

Title

Summary of Changes for Submission 000

DAGM GCPR 2024 - Fast Review Track

Reviewer 1

An analysis of the impact of the parameter λ is missing.

An experiment that analyzes the impact of the parameter λ has been added to the revised paper. The results are reported in Table 5.

The function f needs to be better explained.

The function $f(x, y)$ multiplies the values x and y . We extended the discussion of the function f on page 2, l. 27-31.

A comparison to the work [1] is missing.

The approach [1] estimates the age of zebras. Our approach counts how many persons use a zebra crossing. We therefore cannot compare our approach to [1].

There are not enough qualitative results.

Additional qualitative results have been added to the supplementary material. The results are shown in Figure 3-5 of the supplementary material.
